

All About Angels

Angel Pendant Necklaces

Our glass tile necklaces make a great addition to your jewelry collection or gift for someone special.

All proceeds are donated to further Rett Syndrome Research.

- * Rett Syndrome is the most physically disabling of the autism spectrum disorders.
- * It strikes at random in early childhood, affecting little girls almost exclusively.
 - * Many girls live into adulthood, requiring total, 24-hour-a-day care.
- * There is no treatment beyond supportive, and often ineffective, measures such as feeding tubes, bracing, orthopedic and GI surgeries, and medications for anxiety and seizures.

Rett Syndrome has potential to be the first reversible brain disorder.

Pendants measure 7/8" in diameter and are finished with a clear glaze. The tiles are sealed, but are not completely waterproof, we recommend not showering or swimming with the pendant on. All necklaces include a coordinating multi-strand satin ribbon with standard closure.

Proceeds benefit Dr. Alan Percy's Rett Syndrome Clinic in Birmingham, AL
